... for a cleaner world ☀

# Power-Vacs

## for industrial and commercial use

OERTZEN Power-Vacs for wet and dry dirt are versatile and sturdy machines for industry, trade and communities.

Their outstanding power (up to 3 kW) gives high cleaning performance. It also makes operation efficient in all fields.

Durable containers made from high impact plastics, solid tracks, micro strainers and accessories all included - that's what you get with OERTZEN's Power-Vacs.

OERTZEN Power-Vacs working reliably for:

- industry
- maintenance services
- car and truck fleets
- facade/building cleaners
- painting contractors
- plumbing workshops
- roofers
- fire brigades
- transport companies
- building contractors

## OERTZEN Power-Vacs save time and money.

Daily, hard operation requires solid engineering. OERTZEN Power-Vacs stand for reliability and efficiency.

The turbines are standardised and fitted with multistage compression. They are extraordinarily strong at very low power consumption. All turbines have got a separate motor cooling to prevent water from entering the electric installation.

This simple valve prevents air from coming in, if the machine is operated with only one instead of all the turbines.

A float valve in all vacs interrupts the vacuum and protects the turbines from water damage.

OERTZEN does not use one-way paper strainers for environmental reasons.

All Power-Vacs have got washable micro strainers, which correspond to health-care specifications.

Technical Data	NT 43	NT 90-2	NT 90-3	WPS 90
	wet	wet	wet	Pump**
container capacity (l)	43	90	90	90
useful capacity (l)	33	75	75	75

order-no.	10.805.043	10.805.086	10.805.093	10.805.088

\* EN 60704-1 \*\* cpl. with integrated draining pump (6 m³/h)

### Standard equipment (all):

10 m electric cable, 2,5 m suction hose, complet tool set

The attached CE-sign ensures that all Power-Vacs comply with national and European safety regulations. A corresponding declaration of conformity comes with every machine.

Set 2

A very useful accessory is the track-roller-nozzle for dry dirt and liquids – available for all models.

This kit converts your Power-Vac into a cyclone vac with 100% separation of micro dust particles. Simply mount vacuum head of Power-Vac onto it.
